About Africa Risk Compliance

Headquartered in Exeter and London, UK and with branch offices in Lomé, Togo, Cotonou, Benin and Lagos and Port Harcourt, Nigeria, Africa Risk Compliance Limited (ARC) was established to bring together a team of Africa and maritime security experts to address challenges faced by those operating in Africa. With roots in the security sector, our key service offering is the management and arrangement of security in the complex jurisdictions of the nations around the Gulf of Guinea.

In 2021, ARC expanded its service offering to provide a management service to arrange embarked armed guards in the Indian Ocean, and since 2021, risk management services to counter the threat of drug smuggling on merchant vessels, and journey management and on-shore vehicle services in Nigeria.

Analysis

Since Russia's invasion of Ukraine in February 2022, we have recorded more than 30 maritime security incidents in the Black Sea involving merchant vessels. These incidents include missile attacks, drone attacks, and vessel detentions. While some of the merchant vessels that have been hit by missiles or damaged during port attacks were victims of collateral damage, many vessels have directly been targeted by Russian armed forces since the start of the war. We have recorded five incidents where the Russian military has intercepted and detained merchant vessels they suspect of involvement with Ukraine.

The Black Sea continues to be a high-risk area for all vessels. The region is highly unpredictable, and the security situation can change at any time. Crew should operate at MARSEC Level 3 when transiting through the area, and ensure they are prepared to respond to any potential threats or emergencies. The threat in ports in Ukraine and Russia is also elevated as port cities – particularly those in Ukraine – are popular targets. Vessels calling at Ukraine's ports are especially vulnerable because following Russia's withdrawal from the Black Sea Grain Initiative in July 2023, the military claimed that any vessel leaving a Ukrainian port is a legitimate target.

Over the course of the conflict, Russian forces have planted hundreds of sea mines in Ukrainian waters that have since drifted, presenting a risk to merchant vessels across the Black Sea and civilians on the coasts. We have recorded 22 incidents involving sea mines since the start of the war, with most incidents occurring outside Ukraine. Vessels in the Black Sea should remain vigilant, avoiding floating objects, maintaining lookouts, and monitoring local navigation warnings.

Reports 2 - 8 January 2025

Nothing to report.

Analysis

Somalia-Based Piracy

The threat of Somalia-based piracy in the region has recently increased following a years-long pause in activity, indicating that armed groups on the coast of Somalia are still willing and capable of pirate attacks. Since 22 November 2023, there have been more than 40 Somali piracy incidents reported, including the hijacking of three bulk carriers and several fishing vessels. While many of the captured fishing vessels have since been released, reports indicate that several are still under pirate control and are likely being used as motherships for future attacks. In mid-April 2024, it was announced that pirates released the MV ABDULLAH and its 23-member crew following the payment of a \$5 million ransom. The Bangladeshi-owned vessel had been hijacked a month prior off the coast of Somalia. The payment of a ransom to pirates is likely to inspire additional attacks.

Between mid-June and the end of August 2024, there was no pirate activity reported in the Indian Ocean and the Arabian Sea. This was likely due to the monsoon season and rough weather conditions that made it harder for pirate groups to carry out attacks. However, pirate activity has resumed since weather conditions have improved in the region. Five suspicious approaches by suspected pirate groups have been reported since 26 August 2024, and on 1 September 2024 three suspected pirates were arrested in Bereeda, Puntland following an operation by security forces. Four other suspects evaded arrest. These incidents were followed by a report by naval sources stating that a pirate group had set sail for the Indian Ocean from Ceel Huur in Somalia's Galmudug state on 22 October 2024. Since this report, three bulk carriers have reported suspicious approaches and three fishing vessels have reportedly been attacked by pirate groups. One fishing vessel that was hijacked on 27 November 2024 is currently being held by a pirate group. The group has refused a ransom proposal to release the 18-member crew.

Naval sources have stated that there are several pirate camps along the eastern coast of Somalia between the towns of Xaafun and Garacad. The town of Eyl has historically been a piracy hotspot and it is believed that much of the current pirate activity stems from this location. There may also be pirate camps on Somalia's northern coast between the towns of Bosaso and Qandala, making attacks in the Gulf of Aden a possibility.

Due to the severity and the number of attacks that have taken place this year, as well as the opportunistic nature of these attacks and recent reported activity, *the risk of piracy remains high for all merchant vessels transiting through the Indian Ocean, the Arabian Sea, and the Gulf of Aden.* This risk applies deep offshore, as attacks have been reported as far as 600nm off Somalia's coast. It is important to note that though most of the reported incidents have occurred within the Indian Ocean High-Risk Area (HRA), pirate groups have a demonstrated ability to carry out attacks as far as 1,000nm away from the coast of Somalia.

Iran and Wider Conflict Threats

Since 2021, Iran has seized or attempted to seize more than 20 merchant vessels. Such incidents are often followed by claims in Iranian media that the merchant vessel had committed a crime such as hitting an Iranian vessel or for fuel smuggling. When seizing vessels, Iranian forces are known to open fire and show serious disregard for the safety of crew and the environment. Iranian forces have also used airborne weapons against vessels, which is an evolution from the mines and waterborne IEDs (WBIEDs) previously used. These are still considered a threat as well.

Iran's seizure of an Israel-linked vessel on 13 April 2024 occurred amid heightened tensions in the region due to the ongoing Israel-Hamas conflict and followed the suspected Israeli strike targeting the Iranian Consulate in Syria on 1 April 2024. The incident, along with the Revolutionary Guard's recent threats to close the Strait of Hormuz, suggests Iran may continue to use the maritime space within the context of its conflict with Israel. Consequently, there is a risk to Israel-linked vessels transiting through or calling at ports in the Gulf of Oman, the Strait of Hormuz, and the Persian Gulf.

Heightened Threat in the Red Sea, Gulf of Aden, and Bab el-Mandeb Strait

Background

On 14 November 2023, in response to the ongoing war between Israel and Hamas, Yemen's Houthi leader Abdul Malik al-Houthi, issued a warning that his forces could make further attacks on Israel and target Israel-linked ships in the Red Sea and the Bab el-Mandeb Strait. Since the announcement we have reported on more than 130 related security incidents targeting merchant vessels in the area, including suspicious approaches, calls to alter course, the hijacking of an Israel-linked commercial vessel in the Red Sea, and dozens of kinetic attacks targeting commercial vessels in the area. Since the attacks began, at least three seafarers have been killed and several others have been injured.

In response to the attacks, several shipping lines announced plans to reroute through South Africa's Cape of Good Hope or pause shipments through the Red Sea until further notice to protect crew and cargo. A number of security platforms have also chosen to increase the cost of their services significantly over the course of this conflict due to the expanded High-Risk Area, associated rise in insurance costs, and the reduced vessel traffic through the Red Sea.

Due to the nature of the incidents and threats that have occurred in the past 30 days, the Red Sea, the Bab el-Mandeb Strait, the Gulf of Aden, and the northern Arabian Sea are "high risk" and the threat is considered high to all vessels. Crew should take precautions prior to entering the area so that they are ready to respond appropriately to any threat and emergency and should operate at MARSEC Level 3 whilst transiting through the area. The threat in ports in the Red Sea is also elevated because they are located in the affected area and in range of Houthi missiles.

Target Profile

Following retaliatory airstrikes by US and UK forces, the Houthis announced they would expand their targets to include US and UK-linked vessels. This threat further expanded in May 2024 after the Houthis stated they would target all vessels within their reach with links to Israel, regardless of nationality or destination. On 13 June 2024, the Joint Military Information Centre (JMIC) issued a note stating that the Houthis's threat profile has evolved to include vessels that are part of a company structure with vessels that are calling at Israeli ports. This includes companies with a fleet that is group-owned, operated, or chartered that may have called at an Israeli port in the past. In November 2024, the Houthis further stated that they would not consider any changes in ownership or flags of ships linked to Israel, and that vessels with any previous affiliations to Israel would still be targeted. It is recommended that companies do a full fleet and port call assessment to determine the threat for specific vessels and whether they meet the criteria to be targeted.

Since these attacks began, 25% of the vessels targeted by the Houthis have had no clear links to the target profile, and nearly 13% may have been targeted based on outdated or incorrect publicly available information. The wider target profile coupled with the instances of mistaken identity significantly increases the risk for all vessels transiting through the region.

Location and Nature of Attacks

To date, most of the incidents reported have occurred north of the Bab el-Mandeb Strait between the ports of Hodeidah and Mokha and in the eastern Gulf of Aden. Since the Houthis expanded their target area in April 2024, two attacks have been confirmed to have occurred in the Arabian Sea. The Houthis have claimed to have targeted several other vessels in the Indian Ocean and have also stated that they have attacked vessels in the Mediterranean Sea, but there is no evidence to suggest these attacks took place.

The Houthis have largely used anti-ship ballistic missiles, anti-ship cruise missiles, and UAVs to carry out attacks, however on 12 June 2024 the group successfully attacked a merchant vessel with the use of an Uncrewed Surface Vehicle (USV). Several USV sightings and attacks have since been reported in the Red Sea. An attack by a rocket-propelled grenade (RPG) launched by a small craft was also reported on 8 August 2024. These incidents confirm that vessels are at risk of attack from the air and the sea.

The pattern of action from the Houthis towards targeted vessels seems to be:

- Contact a vessel by VHF ordering it to change course and sail towards a nearby port (likely Hodeidah), whilst claiming to be the "Yemeni Navy".
- If the vessel disobeys or ignores the order, in previous incidents Houthis have then launched either a drone or a missile against the vessel.
- Such incidents are then followed by a large amount of local social media activity, resulting in an "official" statement from the Houthi spokesman confirming the incident and vessel name.

There have also been several reports alleging that Iranian naval vessels have been stationed in the Red Sea and the Gulf of Aden to support the Houthis with intelligence and target acquisition. It has been noted that the Behshad, a vessel identified as part of the Iranian Navy, maintained a presence at the western end of the Gulf of Aden from 11 January to early April 2024. These allegations have not been confirmed, but the uptick in incidents during this time and the locations in which they have occurred suggest a possible link.

Use of Embarked Armed Guards

As this threat pertains to a wider geopolitical conflict and not piracy, embarked armed guards may not be able to counter all attacks by Houthi forces. If the vessel has embarked armed guards, they will be able to counter attempts to stop the vessel by a small craft and may be able to disable a USV on its approach. However, when facing overwhelming force by an aggressor such as multiple naval-style vessels, helicopters, missiles, or UAVs, the embarked team should stand down for the following reasons:

- An embarked security team will not have the capacity to ward off attacks from kinetic weapons such as missiles and UAVs.
- Any action by an armed team on board may be met with an overwhelming force, which would greatly endanger the safety of the crew.
- Attempts to engage with a boarding force may be seen as provocative and may result in poorer treatment of the armed guards and crew after the boarding force has taken control of the vessel.

International Naval Response

On 19 December 2023, the US Defence Secretary announced the establishment of Operation Prosperity Guardian, a coalition of more than 20 countries with the aim to secure the southern Red Sea and the Bab el-Mandeb Strait for commercial vessels. Naval vessels are currently present in the area, but they are likely unable to defend against every attack or assist all vessels targeted by the Houthis.

On the night of 11 January 2024, US and UK naval and air forces carried out missile strikes on Houthi positions in Yemen in response to the ongoing attacks on merchant shipping and naval vessels involved in Operation Prosperity Guardian in the Red Sea. US and UK forces have since carried out three additional rounds of strikes in Yemen targeting Houthi positions.

On 19 February 2024, the EU launched Operation Aspides, a naval mission to protect commercial vessels in the Red Sea. France, Germany, Italy, Greece, and Belgium have confirmed participation in the protective mandate, which is designed to only act in response to a threat with minimum force. As part of the operation, naval vessels will accompany vessels and an airborne early warning system will be used to protect against attacks at sea.

On 16 March 2024, the Indian Navy carried out an operation against the pirates on the MV RUEN, a bulk carrier that was hijacked by Somalia-based pirates on 14 December 2023. INS Kolkata, with supporting ships and aircraft, forced the pirates onboard to surrender with no injury to crew, pirates or any members of the Indian military. During the operation, the pirates shot down an Indian Navy surveillance drone and fired at INS Kolkata. In response, INS Kolkata disabled the ship's steering system and navigational aids, forcing the vessel to stop. Following the operation, the vessel and crew were released with all safe and the vessel proceeded to India.

Yemeni Ports and HRA Floating Armoury Updates

Maritime Security - Lagos, Nigeria

Current Threat Levels

Theft, Robbery & Stowaway
STS and NPA Anchorage: HIGH

Port Area: HIGH

Piracy & Kidnap for Ransom STS and NPA Anchorage:

MEDIUM

Port Area: LOW

Reports 2 - 8 January 2025

2 January 2025. Theft (Unsuccessful). Lagos Port, Nigeria. A tanker was boarded by four suspects whilst at anchor at Lagos Port. The suspects escaped empty-handed once they were spotted by duty crew. The crew and vessel were reported safe, and the incident was reported to port authorities.

Analysis

Lagos has consistently seen a high number of stowaway incidents on vessels in anchorage and at berth. All vessels should carry out stowaway searches prior to departure and watch out for small boats around the rear of the vessel.

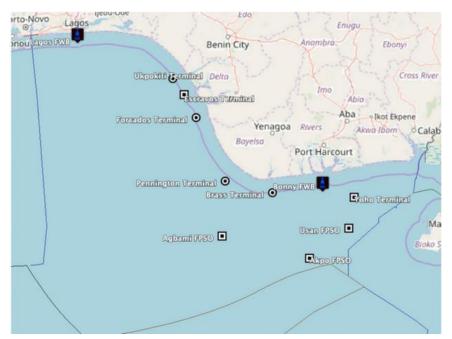

There remains a high risk of armed robbery and theft at all Lagos anchorages and across the port area. If spotted by crew and alarm raised, thieves and robbers will usually flee without altercation or threat to crew. Terminals inside the port have poor security infrastructure, so vessels at berth are easy targets for thieves, robbers and stowaways. It is recommended that vessels maintain a vigilant watch, especially at night and dawn and dusk, when visibility is poor. Ships should also stow and lock away any tools, ropes and valuables on deck.

Last Incident

• 28 November 2024. Armed Robbery (Successful). Tincan Port, Lagos, Nigeria. A containership was boarded by sea robbers whilst berthed at Tincan Port. Crew members were reportedly made aware that the vessel had been boarded after noticing that razor wire was missing on the port side. Up to twenty robbers, armed with knives, had gained access to the vessel and reportedly restrained a duty crew member, a stevedore and the bosun. The perpetrators then stole cargo items from the containers and escaped on two skiffs after they were spotted by a duty watchman.

Maritime Security - Offshore and Niger Delta, Nigeria

Current Threat Levels

Delta Creeks and Rivers: HIGH

Bonny River: HIGH

Escravos/Forcados: HIGH

Calabar River: HIGH
Offshore Brass: HIGH
Offshore Bonny: HIGH

Deep Offshore Bonny: HIGH Deep Offshore Lagos: HIGH

Reports 2 - 8 January 2025

Nothing to report.

Analysis

The threat level across the Nigeria EEZ is still considered high. The threat is particularly high in the Bonny River area, as several kidnapping incidents have been reported over the past few months. Though a majority of these incidents have targeted passenger vessels, the incidents point to an increase in insecurity that could affect merchant vessels.

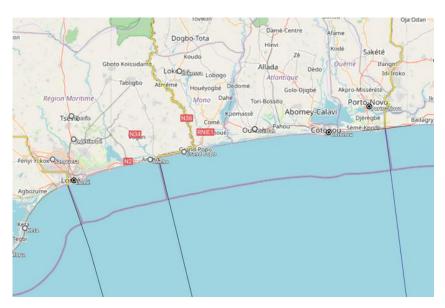

Pirate attacks have demonstrated that the pirates have an excellent understanding of the geographical limits of security escorts and local Naval forces, and they have the ability to board vessels sailing at good speed using light-weight aluminium ladders. There remains a significant threat to all vessels up to 250nm from the coast of Nigeria. Merchant vessels avoiding Nigerian waters should remain extremely vigilant as pirates have shown themselves capable of operating at significant distances from the shore, including outside of Nigerian waters.

Last Incident

• 15 September 2024. Kidnap for Ransom. Bonny River, Rivers State, Nigeria. Local reports state that the Nigerian Navy intercepted an attack on a passenger vessel on the Port Harcourt to Bonny sea route. Few details are available on the attack, but the Navy reportedly rescued 20 passengers from being kidnapped during the incident. According to the commander of the Nigerian Navy Forward Operation Base, pirates in the Bonny River area may be working with passenger boat operators to carry out attacks.

Maritime Security - Benin & Togo

Current Threat Levels

Theft, Robbery & Stowaway

Lomé: MEDIUM

Cotonou: MEDIUM

Piracy & Kidnap for Ransom

Lomé: MEDIUM

Offshore Togo: HIGH

Cotonou: MEDIUM
Offshore Benin: HIGH

Reports 2 - 8 January 2025

Nothing to report.

Analysis

There remains a high threat in the waters offshore Benin and Togo, where vessels often drift awaiting berthing instructions, or carry our STS bunker operations. The area deep offshore Benin should be considered one of the most dangerous areas in the Gulf of Guinea, as there are minimal options for security services or effective response in the event of an incident offshore. Vessels should move further south and west to avoid this area, or move straight into anchorages where there is a greater Navy presence and maritime security services available.

Last Incident

• 6 December 2024. Kidnap for Ransom. 9nm SE of Cotonou, Benin. A fishing vessel was reportedly boarded by five pirates armed with AK-47s in Benin territorial waters. Reports indicate that the pirates boarded from a wooden boat, kidnapped the Master, and held the crew members on board for three hours. The pirates also stole items belonging to the crew. The Benin Navy reportedly dispatched a military vehicle to assist after receiving word of the incident. The vessel is currently docked at Cotonou port and authorities are investigating the kidnapping. The incident is believed to be linked to disputes in local fishing industries.

Maritime Security - Western Gulf of Guinea

Current Threat Levels

Senegal: LOW

Guinea: MEDIUM

Sierra Leone: MEDIUM

Liberia: LOW

Côte d'Ivoire: MEDIUM

Ghana: MEDIUM

Reports 2 - 8 January 2025

Nothing to report.

Analysis

The threat of piracy is higher in the eastern half of Ghana waters. There is an elevated risk of theft, robbery and stowaways at all ports in West Africa. Guinea in particular has a history of violent robbery incidents. Ghana's Takoradi port has a consistent record of security incidents at anchorage, with robbers and thieves targeting vessels for opportunistic theft of valuable items. Most flee once an alarm has been raised and they are aware they have been spotted by the crew. All incidents should be reported to local authorities.

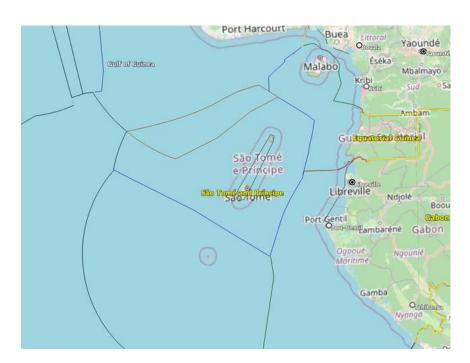

There have historically been a number of security incidents against local fishing vessels in this area. Local reporting and type of attacks suggest either fishing disputes or the involvement of drug smuggling gangs, with some vessels involved in these attacks previously being detained for drug smuggling.

Last Incident

• 7 December 2024. Armed Robbery (Successful). Takoradi Anchorage, Ghana. A robbery took place on board a bulk carrier that was anchored at Takoradi Anchorage. Crew reported seeing three suspects armed with knives near the forecastle. An alarm was raised, and local authorities were notified. One suspect reportedly threatened a member of the crew as the others searched for items. Once a patrol boat approached the vessel, the suspects escaped with some of the vessel's property.

Maritime Security - Cameroon to Gabon

Current Threat Levels

Theft, Robbery & Stowaway

Cameroon: MEDIUM

Eq Guinea: LOW

Sao Tome & Principe: LOW

Gabon: MEDIUM

Piracy & Kidnap for Ransom

Cameroon: HIGH Eq Guinea: HIGH

Sao Tome & Principe: HIGH

Gabon: HIGH

Reports 2 - 8 January 2025

Nothing to report.

Analysis

The threat at anchorages in countries aside from Nigeria should be considered high, as pirates target alternative locations. A pirate group based in Akwa Ibom State, Nigeria is suspected to have carried out attacks in this region. Vessels should remain extremely vigilant when transiting through this area.

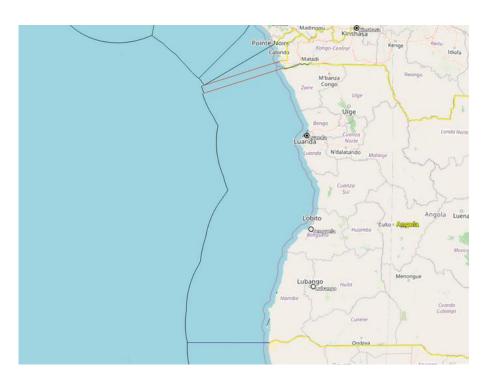

There remains a high risk of piracy attack and kidnap in the waters of countries outside of Nigeria, especially Cameroon, São Tomé and Príncipe, and Equatorial Guinea. In recent attacks, pirates have demonstrated their reach outside of the EEZ and out of the reach of Naval forces and commercial security services. Vessels should avoid "no-mans-land" areas, such as the waters south of Bioko Island, where security is very thin.

Last Incident

• 21 December 2024. Illegal Boarding. 92nm W of Bata, Equatorial Guinea. An offshore support vessel was boarded in north-eastern São Tomé and Príncipe waters. At least six armed suspects boarded the vessel despite vessel's efforts to increase speed and evade attack. All crew gathered in the citadel. The pirates remained onboard for 4-5hrs but later departed the vessel and all crew remain safe. The pirates robbed the vessel before leaving and destroyed navigation equipment. The vessel sailed to the nearest port for support.

Maritime Security - Congo to Angola

Current Threat Levels

Theft, Robbery & Stowaway

Rep of Congo: MEDIUM DR of Congo: MEDIUM

Angola: HIGH

Piracy & Kidnap for Ransom

Rep of Congo: MEDIUM DR of Congo: MEDIUM

Angola: MEDIUM

Reports 2 - 8 January 2025

Nothing to report.

Analysis

The threat across the region should be considered high as Niger Delta-based pirates have demonstrated the capability to operate at significant distances offshore. Small product and bunker tankers should be extra vigilant in this area, as they provide relatively low freeboard, cargo that is attractive for the black market, and crew to kidnap. These vessels also often spend a significant amount of time in the region, possibly allowing pirate group networks to collect intelligence in preparation for future attacks.

Thefts and robberies remain a consistent threat at anchorages in the region, especially Luanda, Soyo, and Matadi.

Last Incident

• 20 June 2024. Theft (Successful). Luanda Anchorage, Angola. A vessel reported a robbery after ISPS duty crew noticed footprints near the hose pipe area during security rounds. A number of items from the ship's stores were reported missing. This is the sixth security incident to take place at Luanda Anchorage so far in 2024.
